Collections = single variable used to store multiple values e.g. list, set, tuple

- list are relation to a fridge

GE = ["milk", "eggs", "water", "yogurt"]

1. list are zero indexed ex. print(GE[0])

2. you can use ":" or "..."

: = used for outputting a range of elements

... = used to output a sequence of steps 2, 3, 5, 8.

- Many Collections have the Same Methods, you can iterate, insert remove, reverse, append, access, clear, get length, get index, count, etc

print(dir(list))

for x in ["A", "B", "C", "D"]

print(List[2])

list is a "type" of a collection
